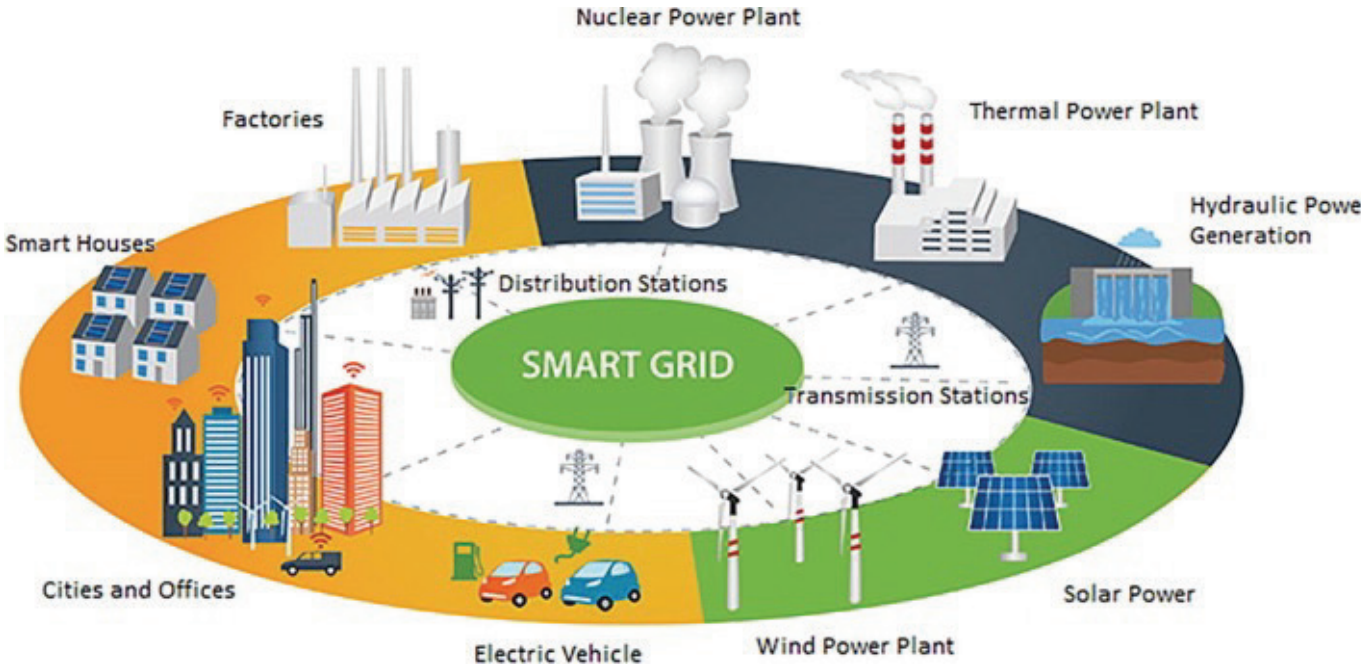
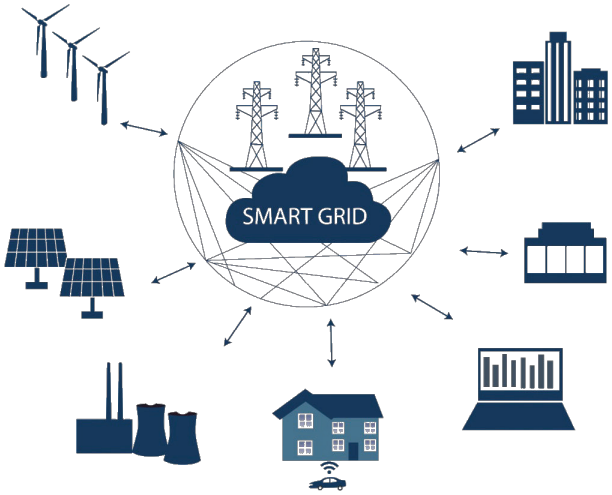
Webinars

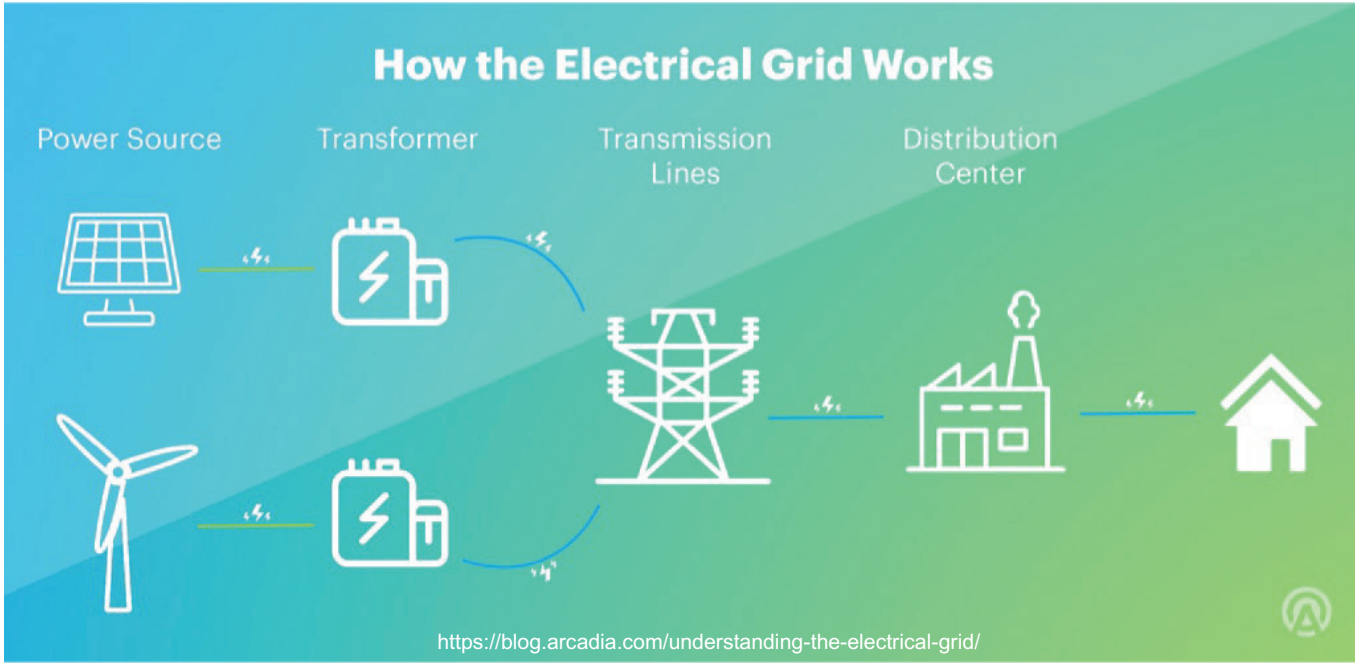
Date	Description of Recent and Upcoming Webinars	Webinar Presentation
17 December 2022 ***Delhi, India***	**Role of the Smart Grid in Facilitating the Integration of Renewables** Distinguished Lecture, IEEE PES Chapter, Delhi, India With the focus on environmental sustainability and energy security, power system planners are looking at renewable energy as supplements and alternatives. But such generation sources have their own challenges – primarily intermittency. It is expected that the smart grid – due to its inherent communication, sensing and control capabilities – will have the ability to manage the load, storage and generation assets (including renewables) in the power grid to enable a large-scale integration of distributed generation.	
What is a Smart Grid





"Smart grid" is a concept with many elements where monitoring and control of each element in the chain of generation, transmission, distribution and end-use allow the electricity delivery and use to be more efficient.

Electric Power Grid

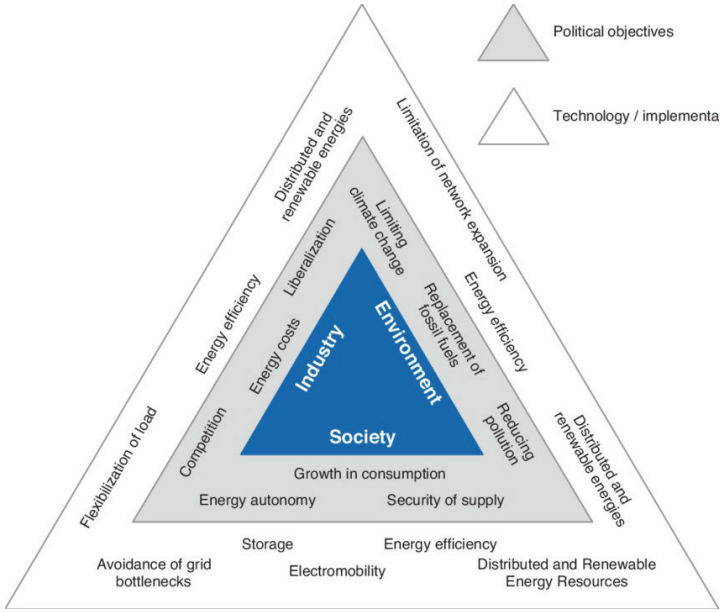


How Does the Electrical Grid Work?

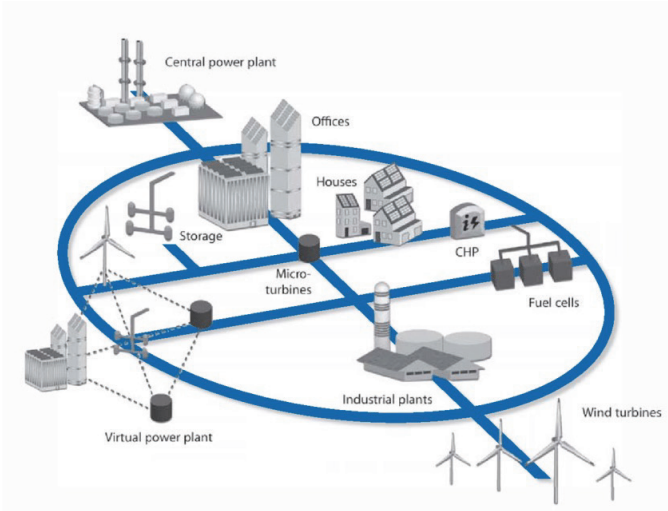
- Power Sources
- Transformers
- Transmission lines
- Distribution centers

Motivation for a Smart Grid

Motivation for a Smart Grid on the basis of the energy management triangle - political objectives and technical implementation.



https://www.researchgate.net/figure/Motivation-for-a-Smart-Grid-on-the-basis-of-the-energy-management-triangle-political_fig1_263264024



Desire to make the grid smarter, safer, reliable and more cost-effective using advanced sensors, communication technologies and distributed computing.

Difference Between a Normal Grid And a Smart Grid

Distribution

Home Business

End-use Appliances

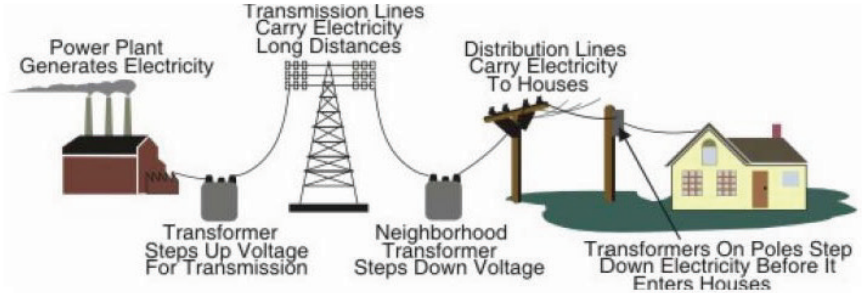
Smart Grid Building Blocks

Evolution of the Grid

Smart Grid

Before **Smart Grid:**

One-way power flow, simple interactions



After **Smart Grid:**

Two-way power flow, multi-stakeholder interactions

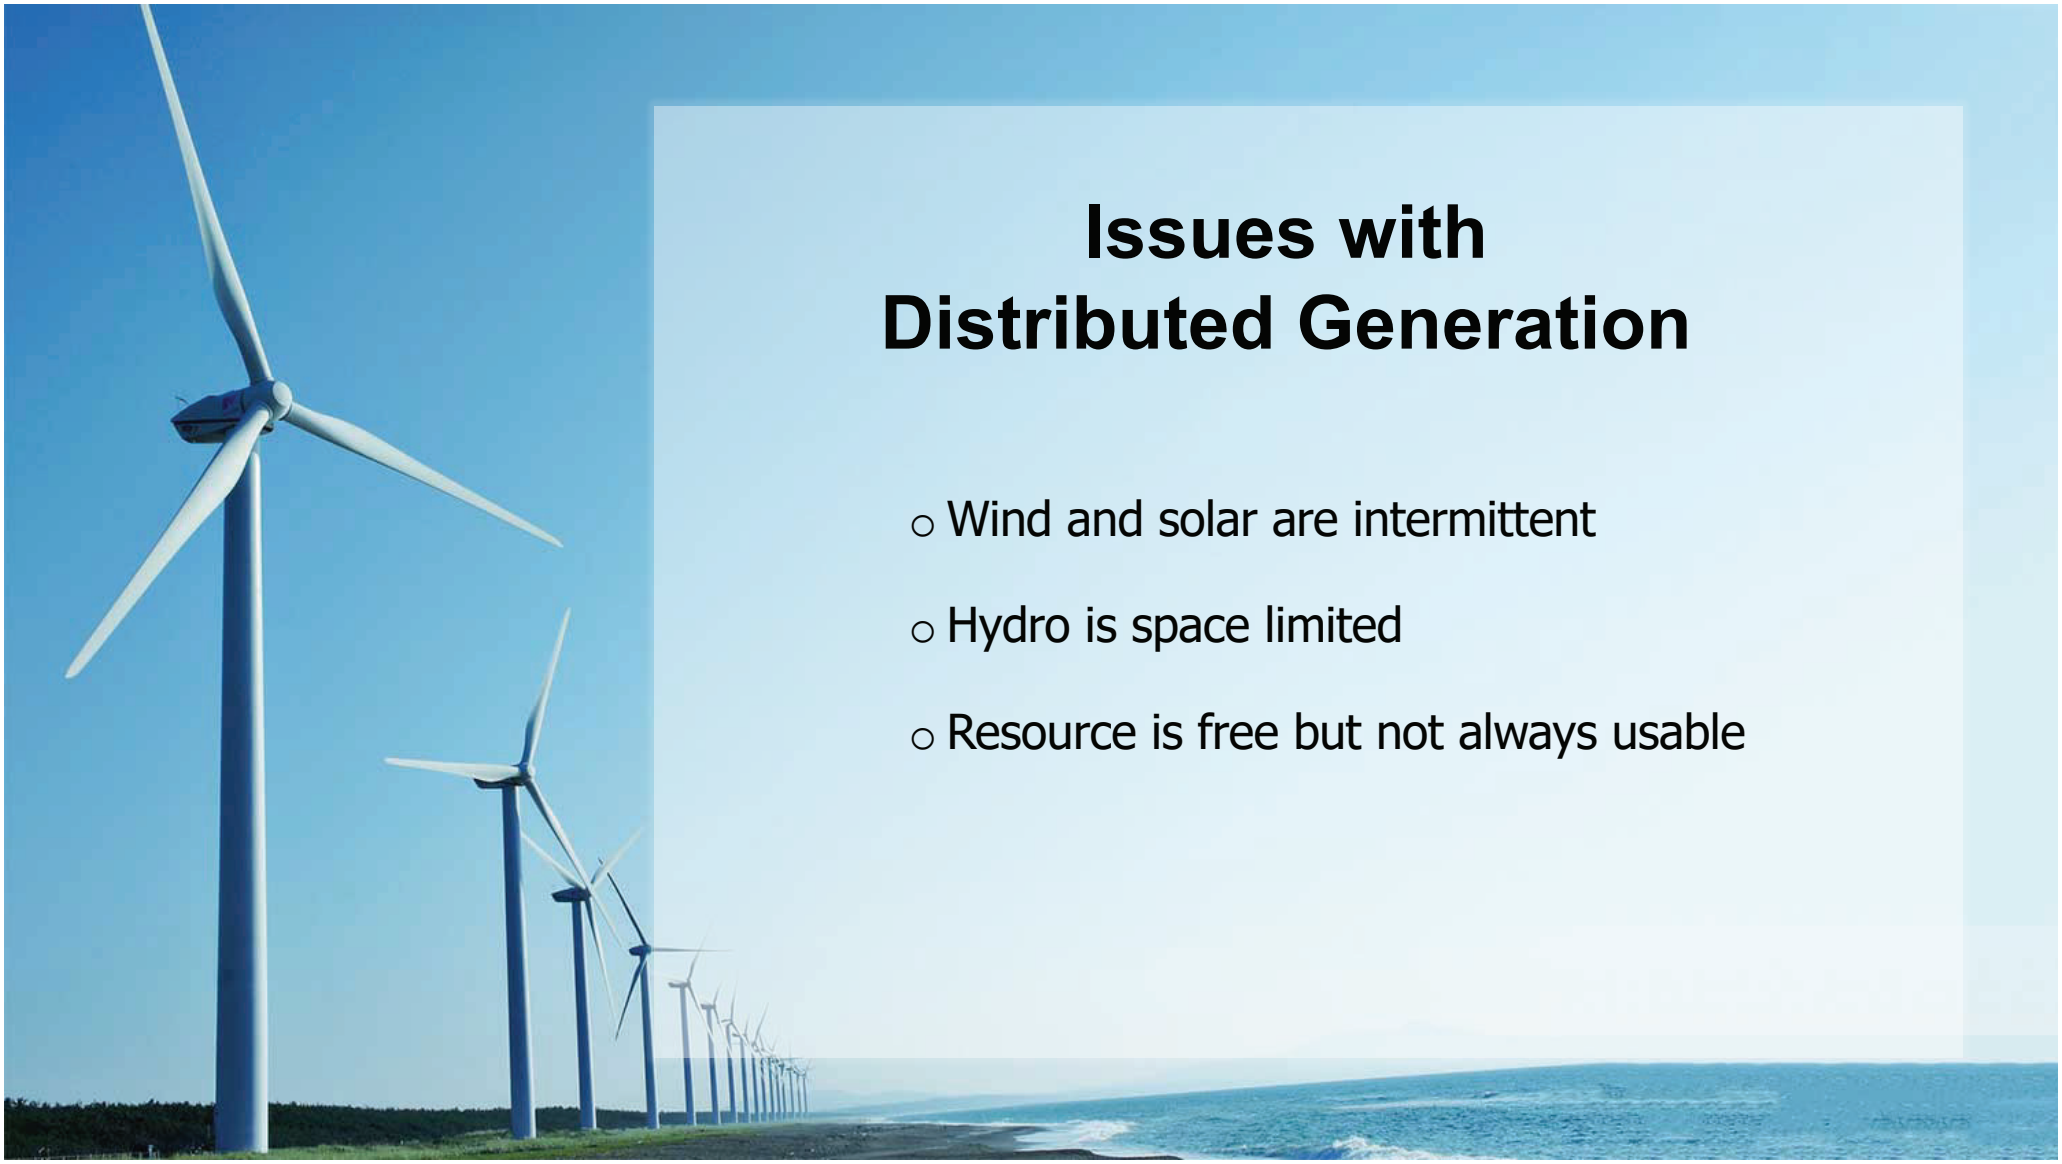
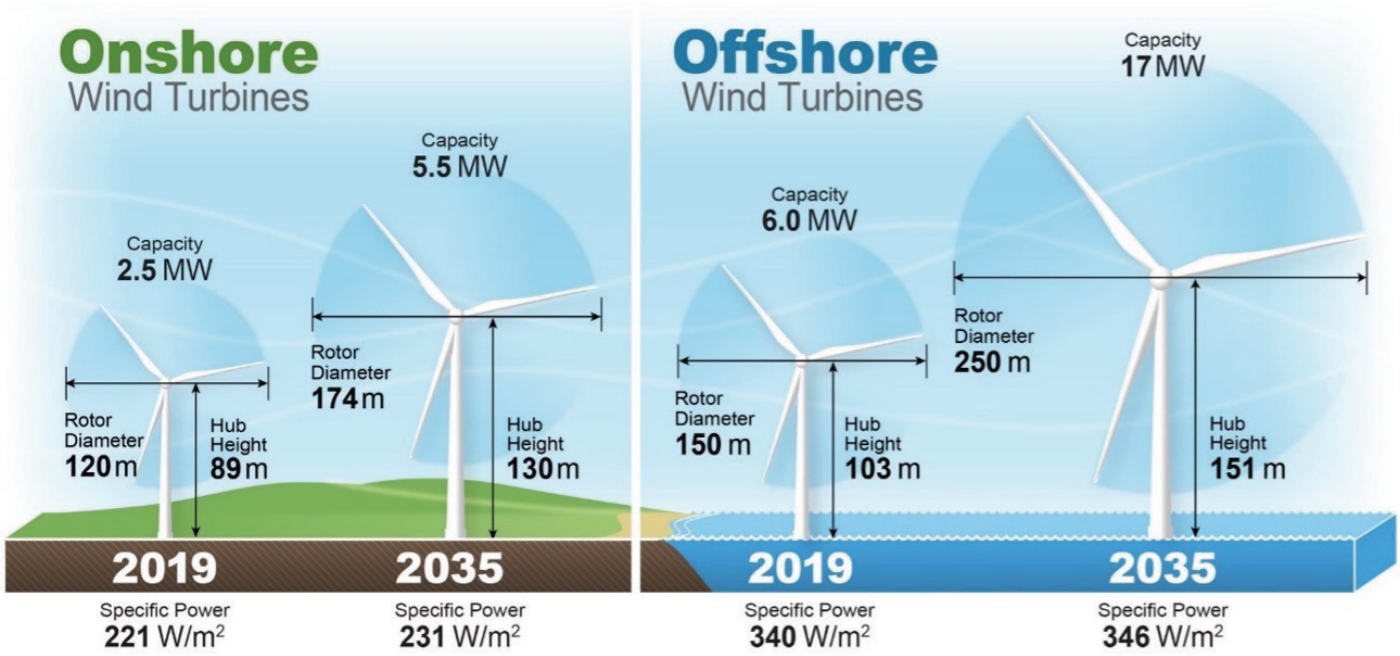
Changing Landscape for the Electric Utility



Issues with Distributed Generation

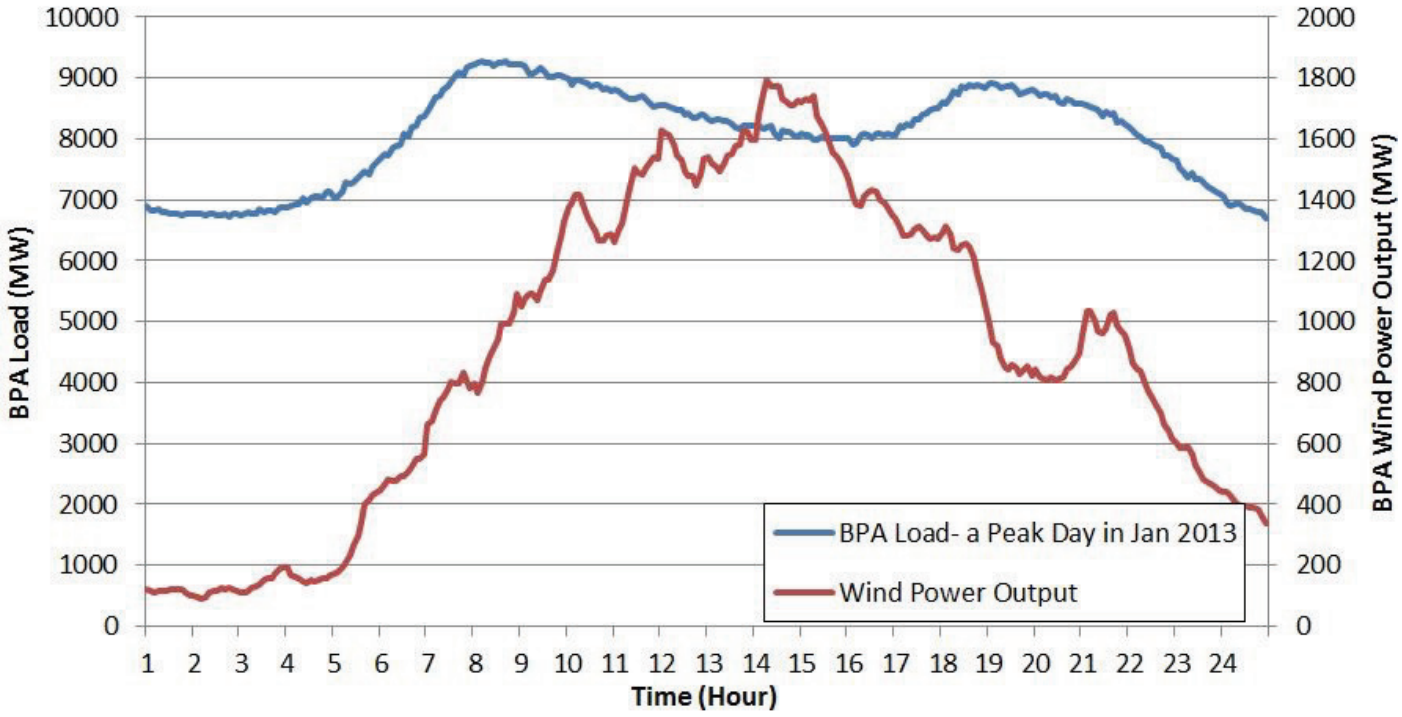
- Wind and solar are intermittent
- Hydro is space limited
- Resource is free but not always usable

Wind Energy

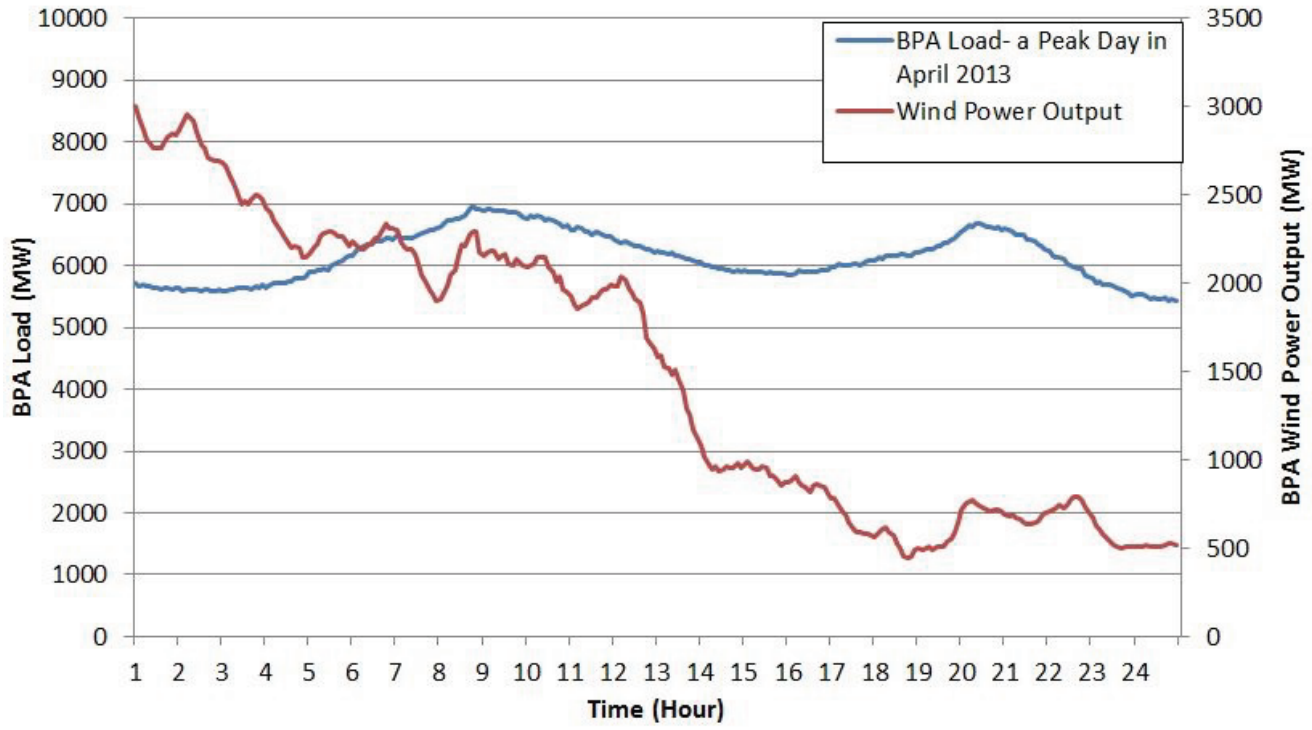


https://www.renewableenergyworld.com/wind-power/wind-power-experts-expect-wind-energy-costs-to-decline-up-to-35-by-2035/#gref

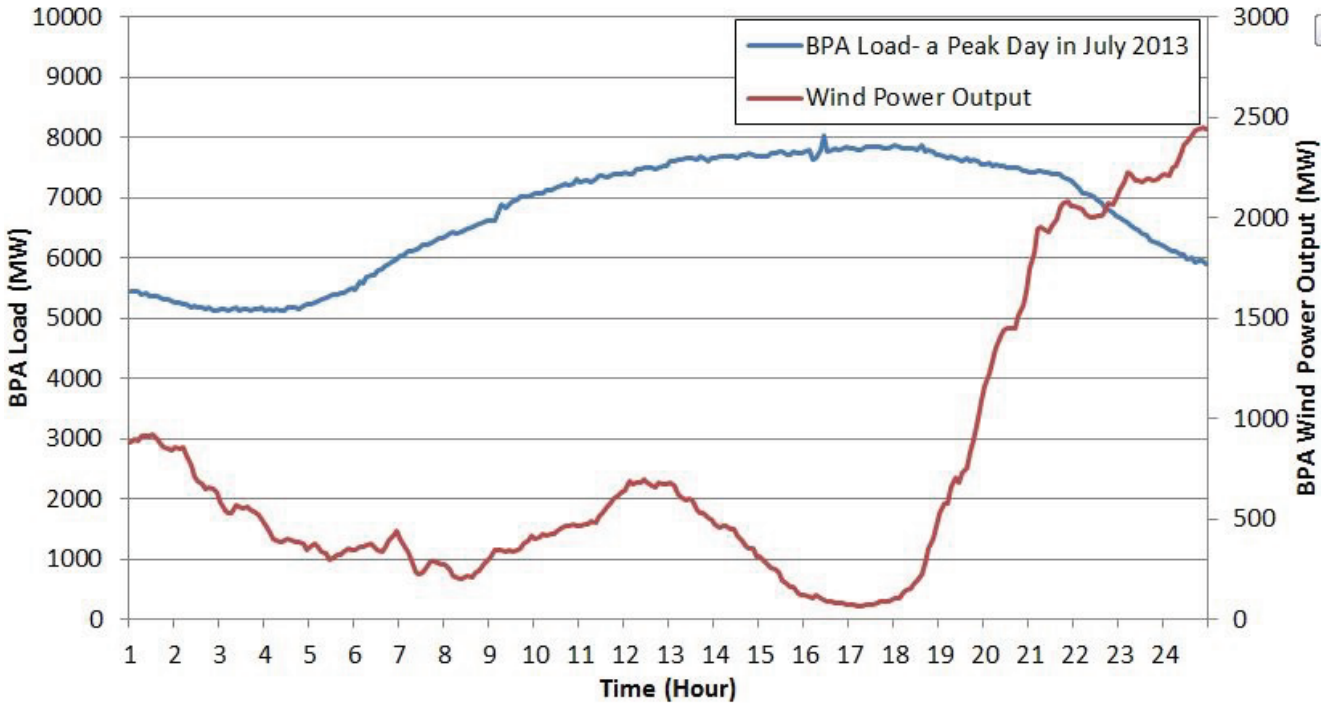
BPA Wind Output and Load Mismatch (A typical day in January)



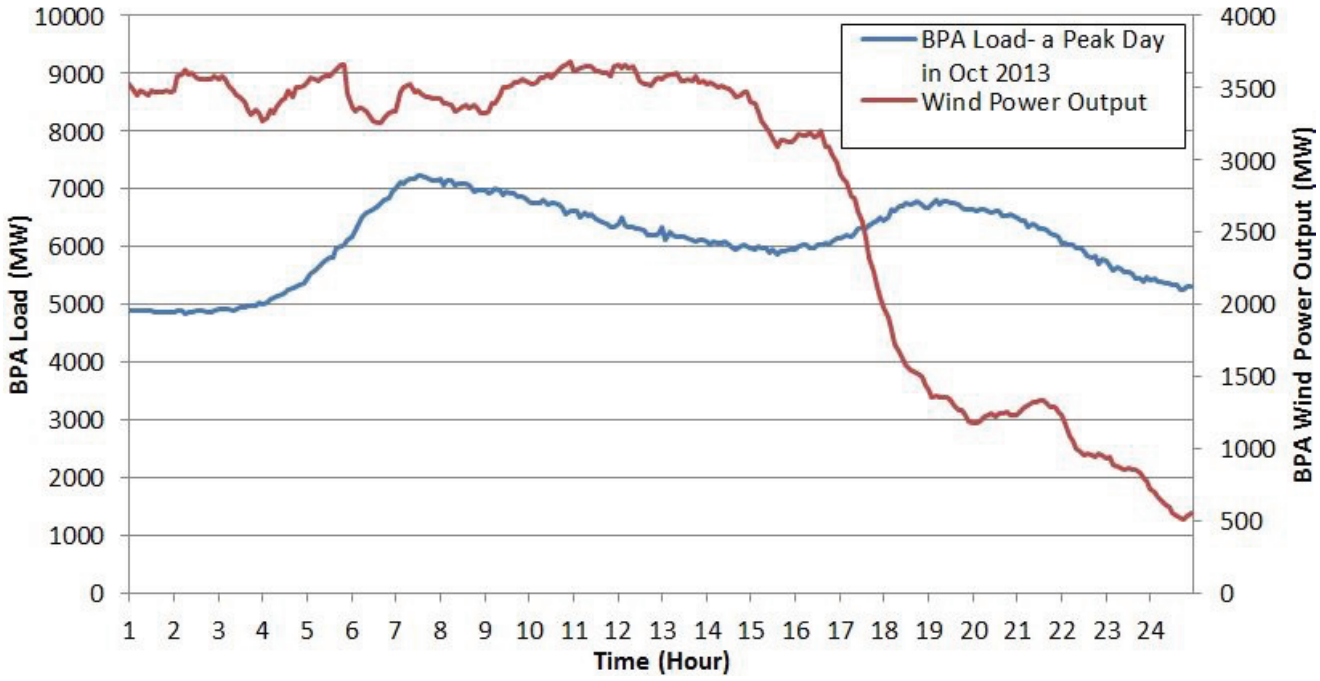
BPA Wind Output and Load Mismatch (A typical day in April)



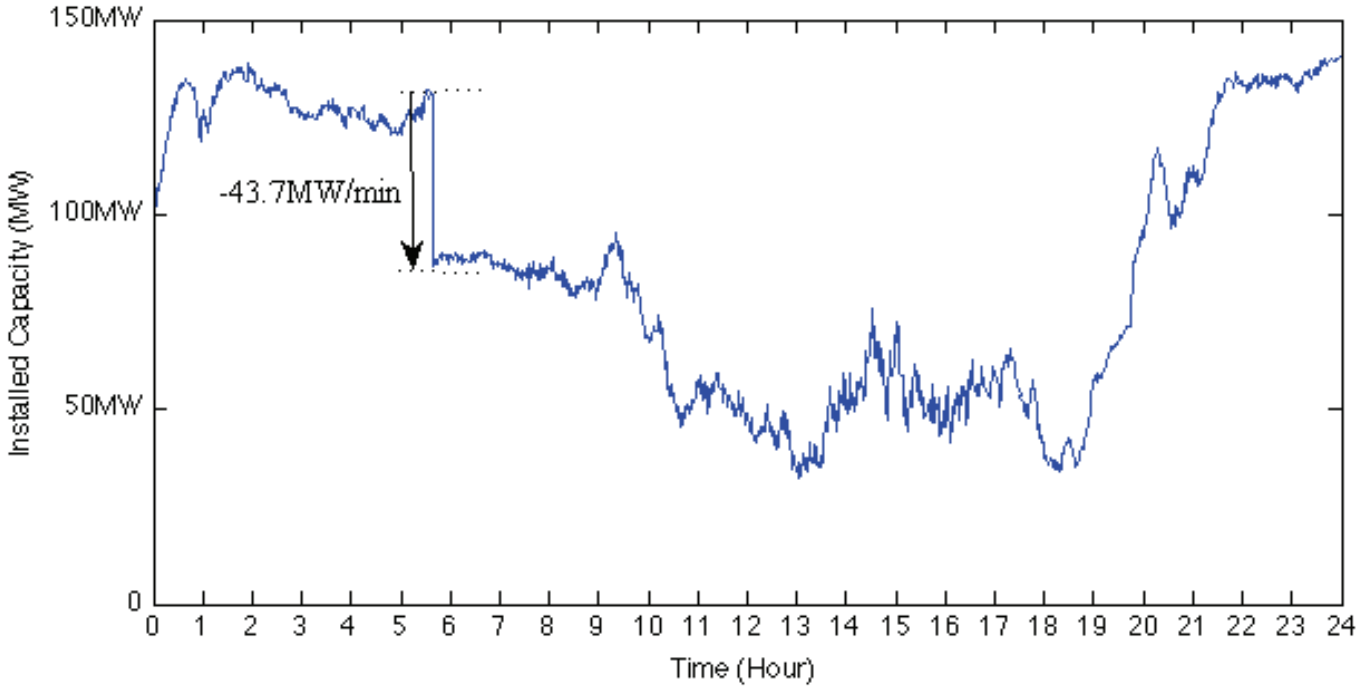
BPA Wind Output and Load Mismatch (A typical day in July)



BPA Wind Output and Load Mismatch (A typical day in October)



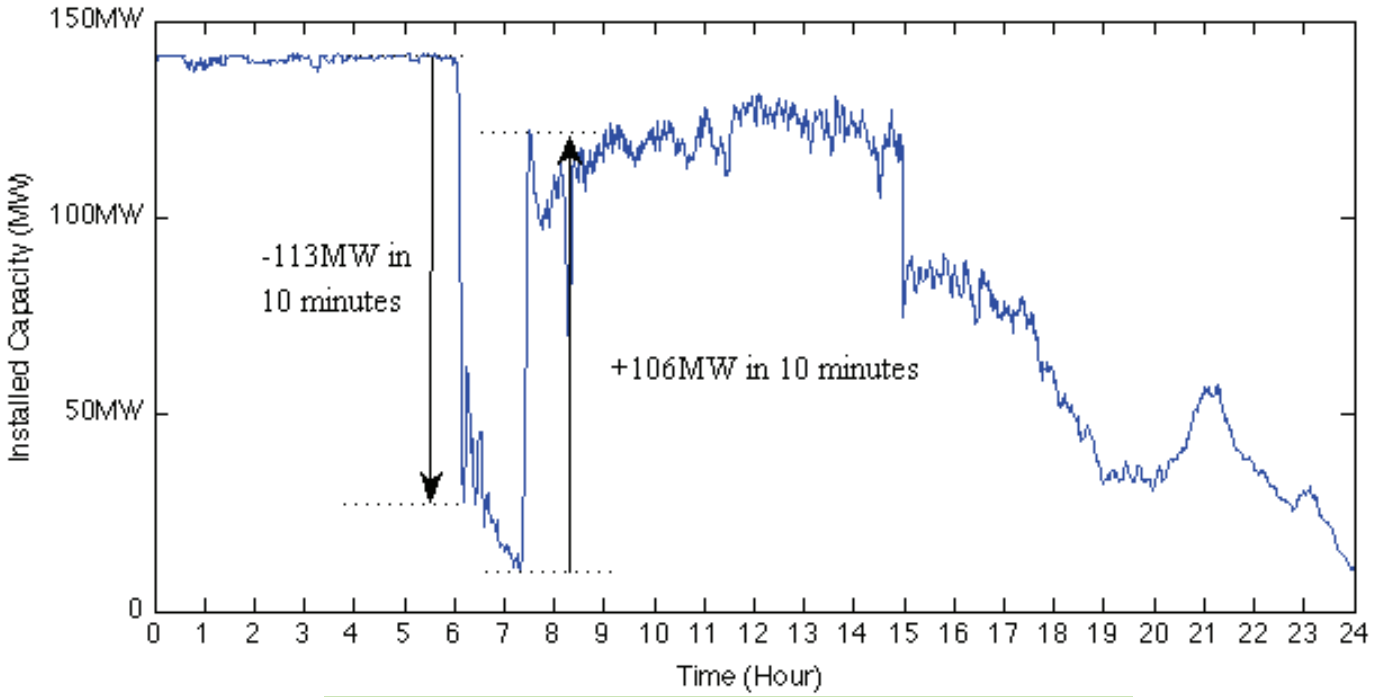
1-minute Variation of a 150MW Wind Farm Output in Texas



Wind output can drop 43.7 MW in 1 minute for a single 150-MW wind farm

Source: NREL

10-min Variation of a 150MW Wind Farm Output in Texas



Wind output can drop 113 MW in 10 minutes, and increase 106 MW in 10 minutes

Solar Energy

Roof-top Solar Photovoltaics in Virginia

Solar Panels in Winter

Intermittency Caused by Weather Events

Solar PV Project in UAE

Sand Storm in Abu Dhabi

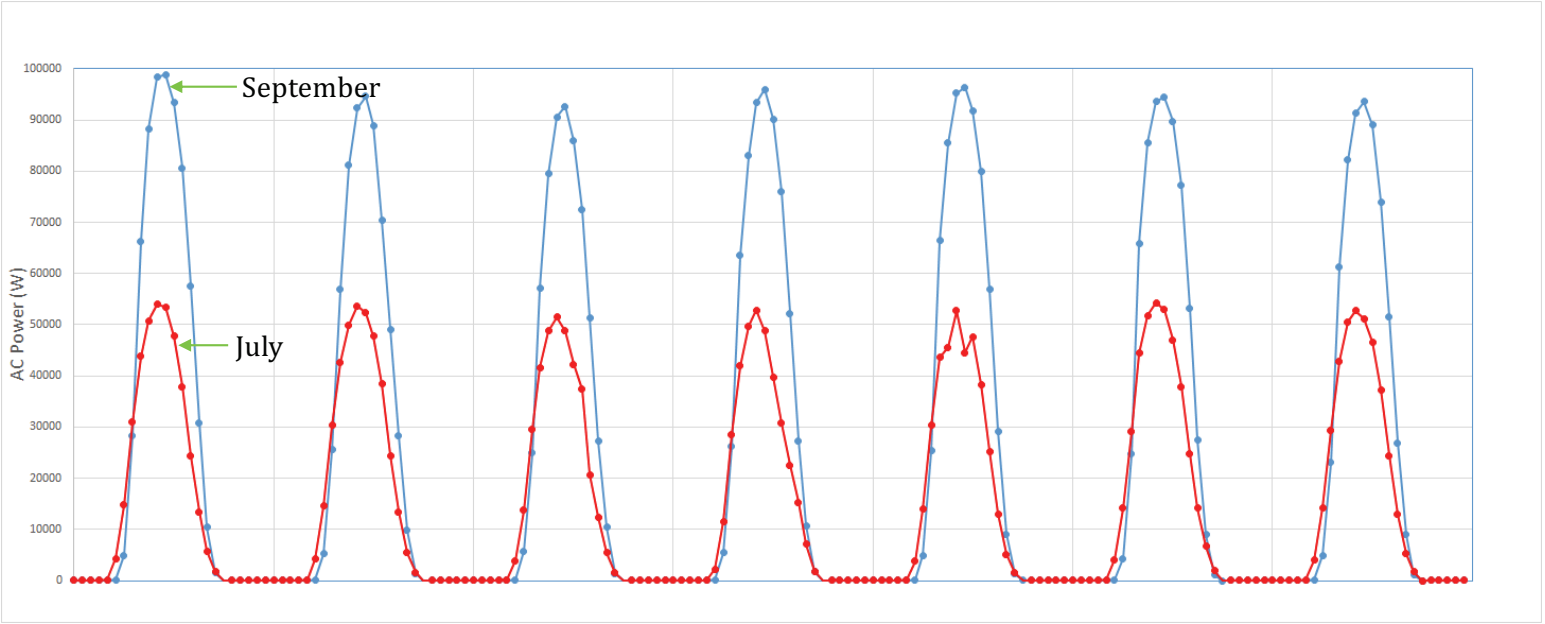
In-depth look at Solar PV in Saudi Arabia

2-MW Roof-top Solar PV plant at KAUST

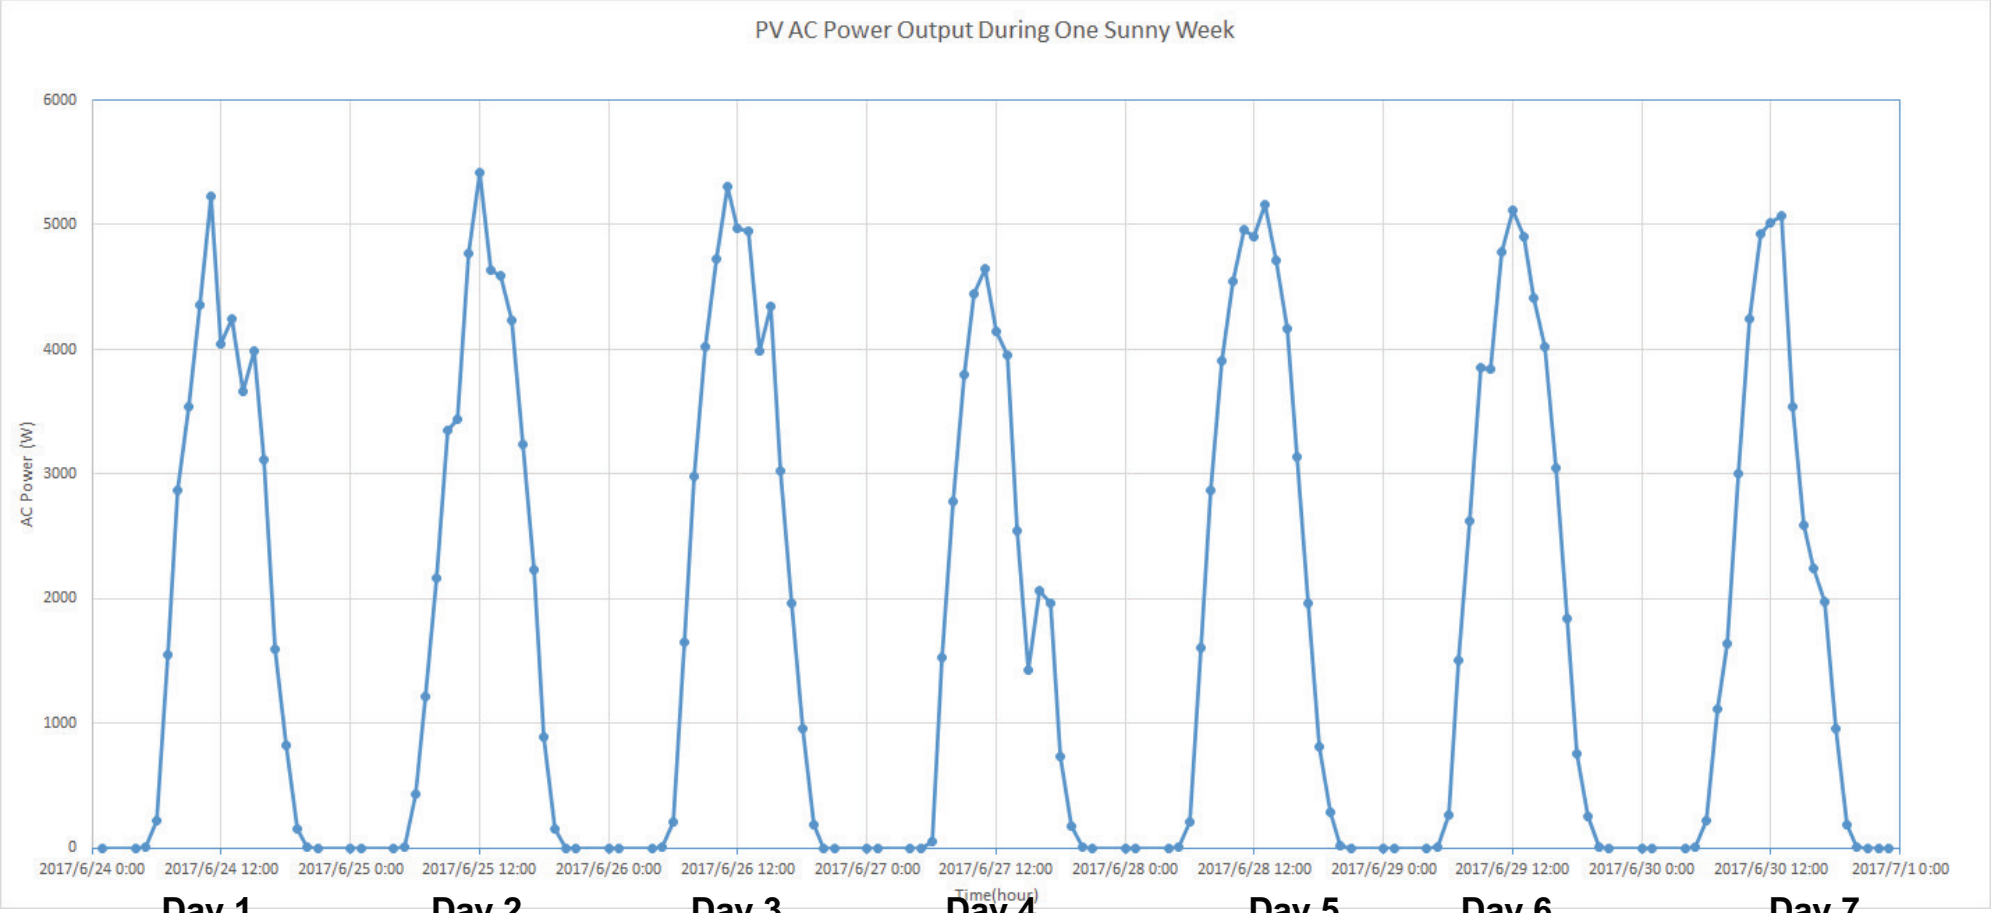
Solar PV Panels in Saudi Arabia

Reality Check

Solar PV Array (100kWp) Riyadh Area

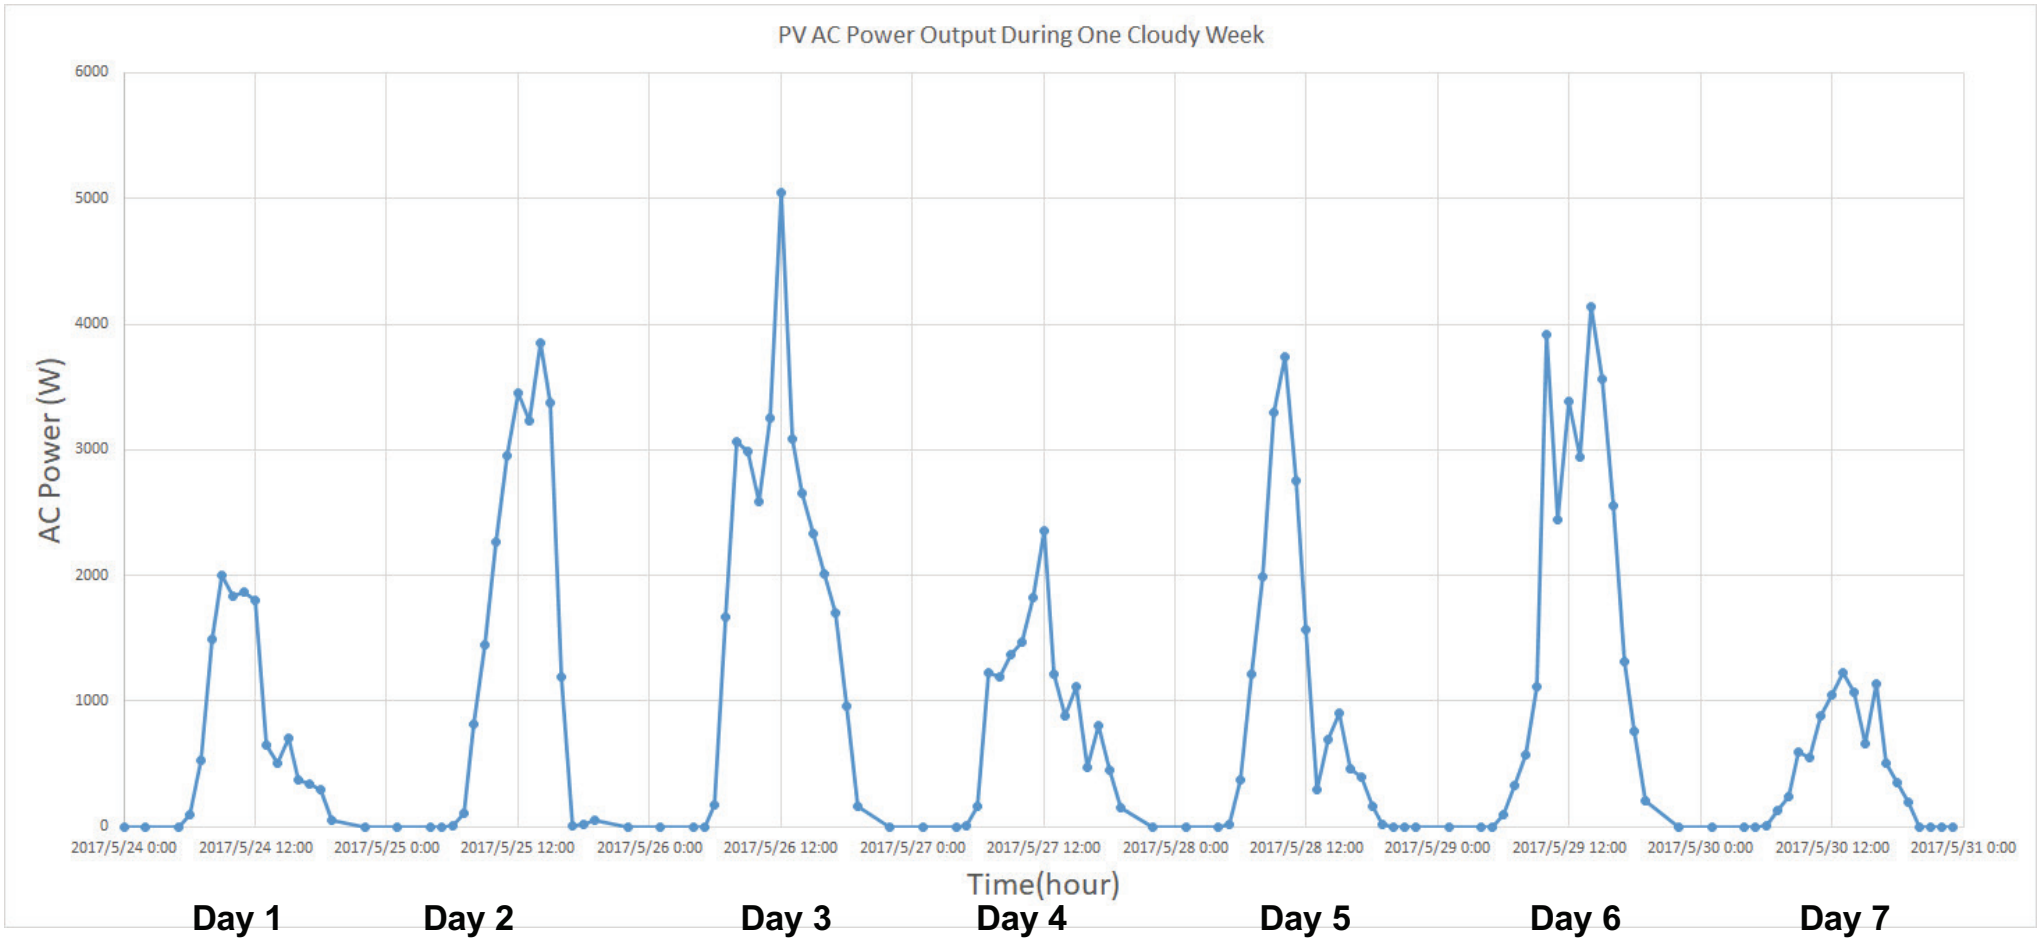


7-Day Solar PV Output (Virginia)

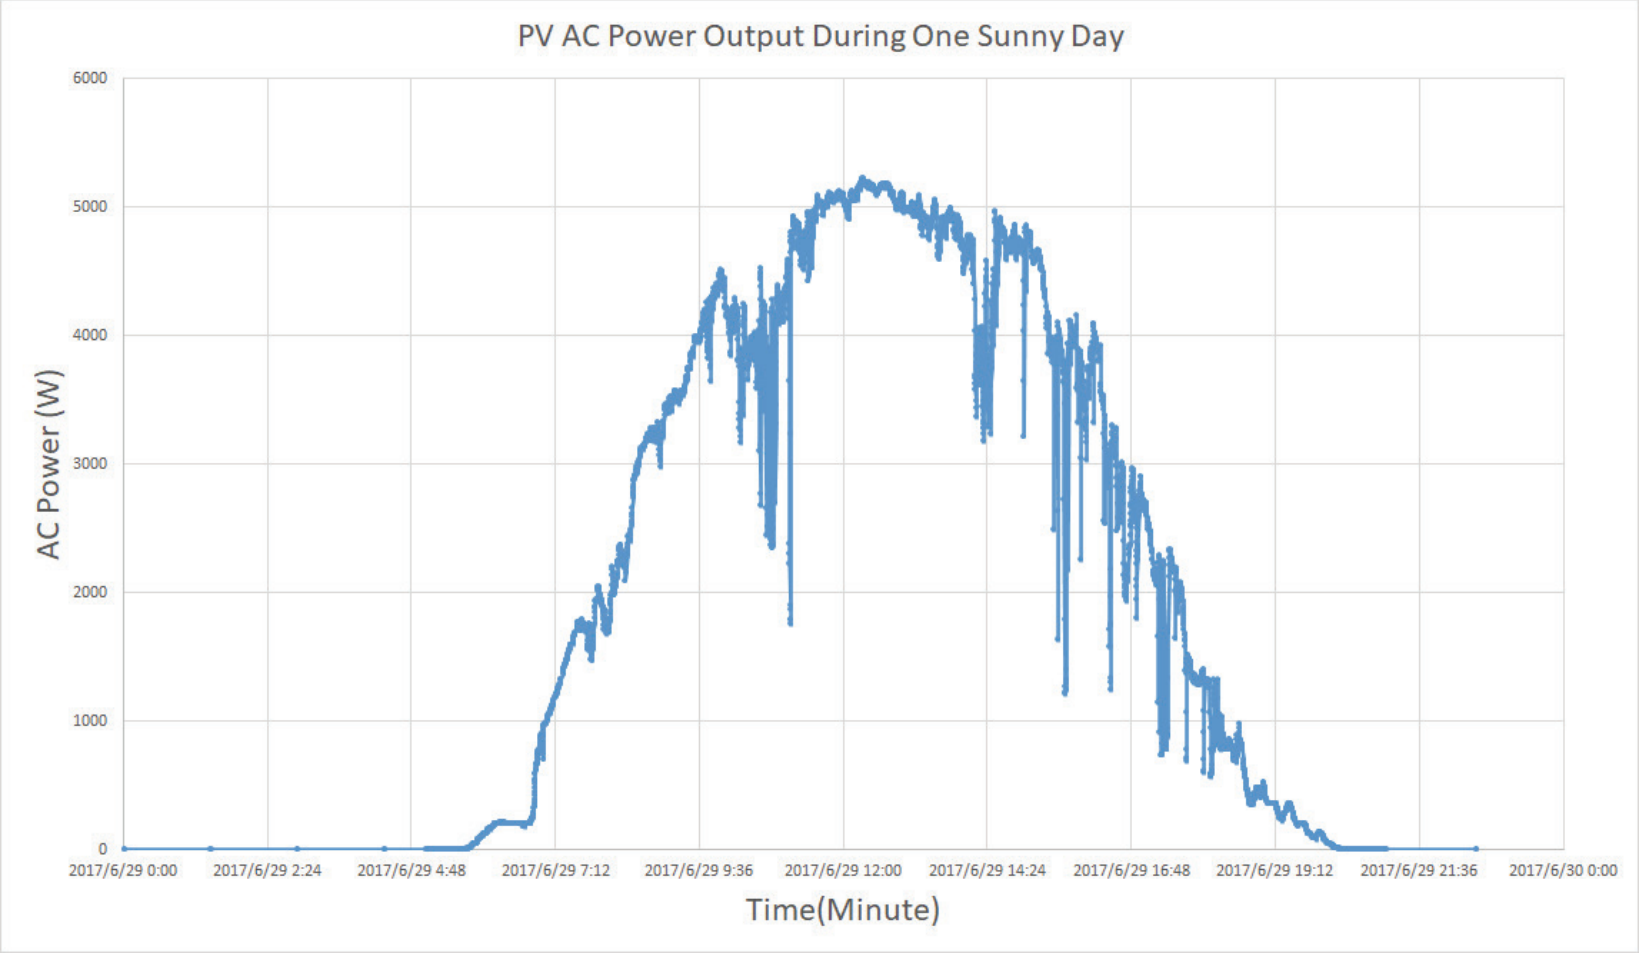


Day 1 **Day 2** **Day 3** **Day 4** **Day 5** **Day 6** **Day 7**

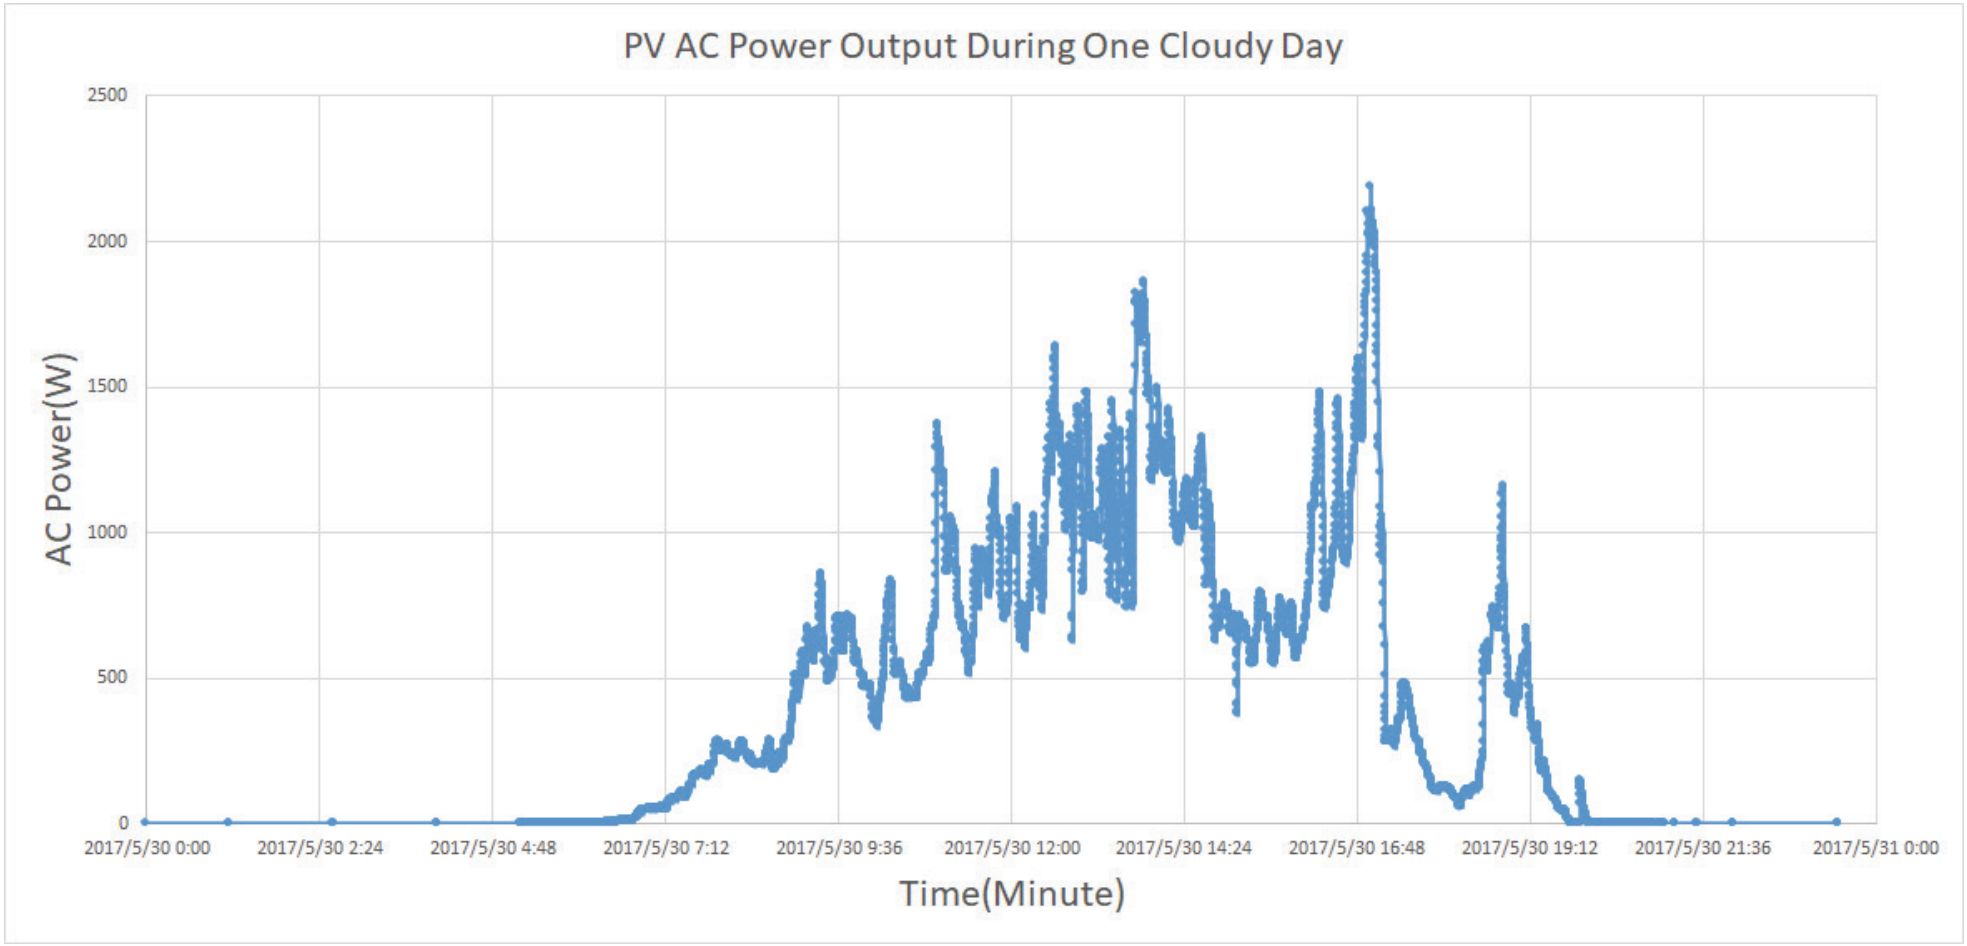
7-Day Solar PV Output (Virginia cloudy)



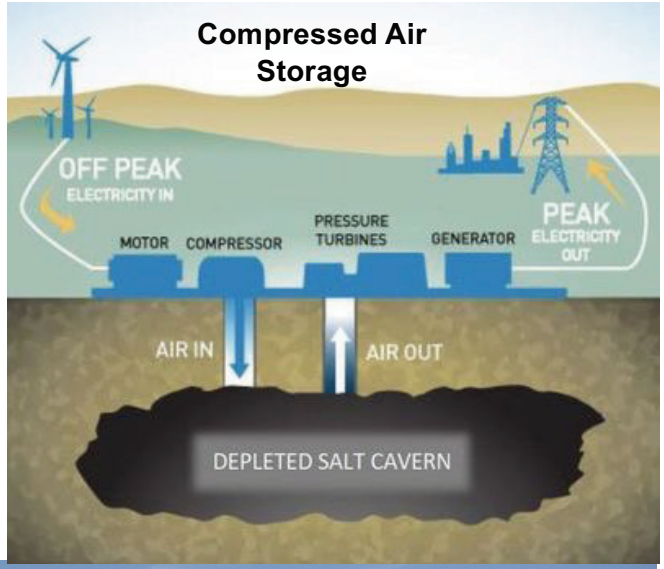
Daily PV Output (Virginia)

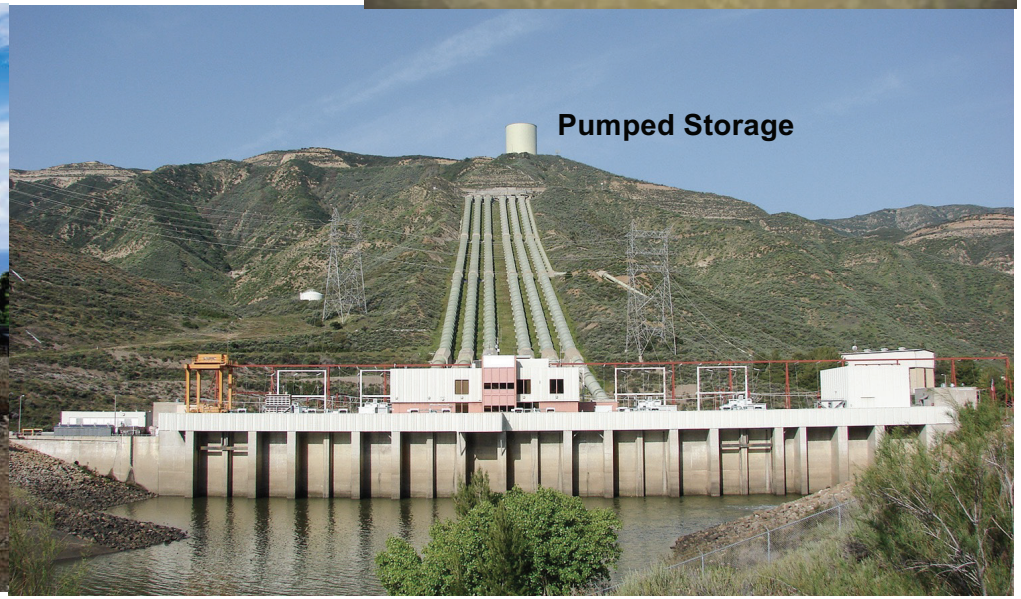


Daily PV Output (Virginia, intermittent)



Can the Intermittency be Absorbed by the Network?





New Paradigm for the Electric Power System

Historically: Demand driven supply (supply responds to demand)

New Reality: Supply driven demand (demand needs to adjust to meet fluctuating supply with help from storage)

THE SMART GRID ECOSYSTEM

The Smart Grid Ecosystem

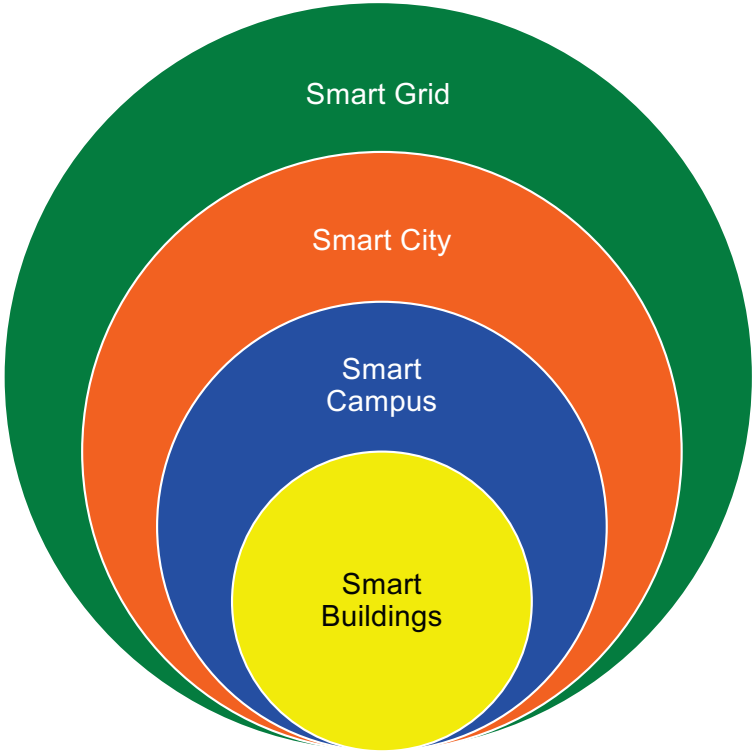
Smart grid: Bi-directional flows of energy, remote control/automation of power, integrated distributed energy…

Smart city: Complex system of interconnected infrastructures and services…

Smart Campus: A collection of buildings managed by the same facility manager…

Smart buildings: Intelligent building automation systems, smart devices, productive users, grid integration…

Ecosystem



Reduce Carbon Emissions from Electricity Production

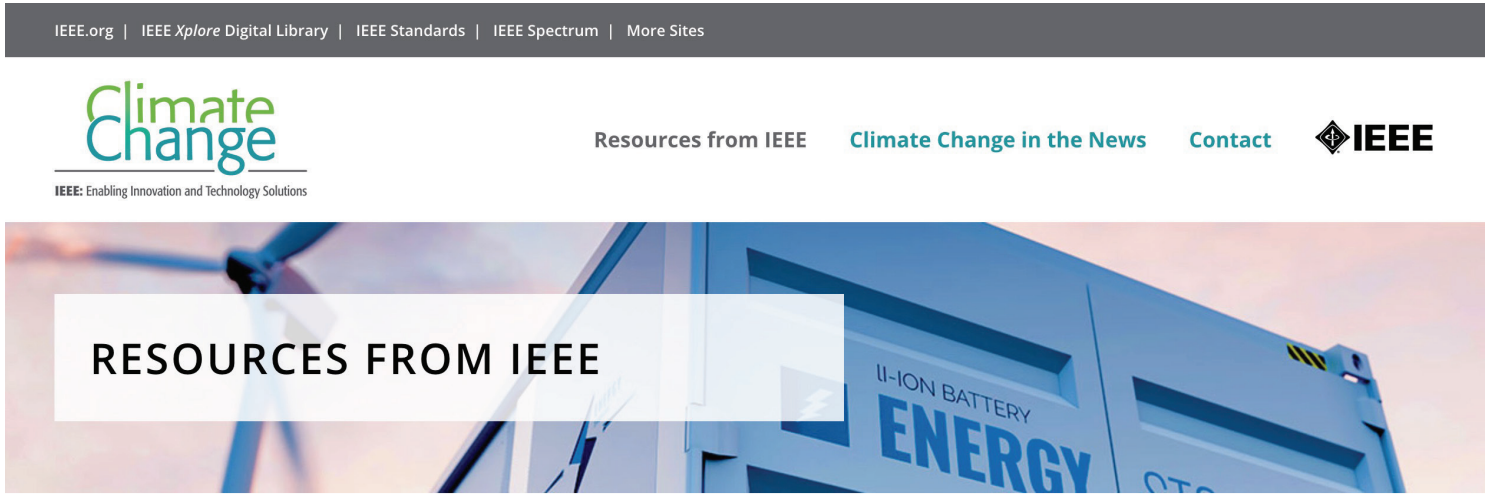
Reduce Carbon Emissions

1. Use less electricity, energy efficiency
2. Use low carbon fossil fuel power plants
3. Use H_2 & other storage technologies
4. Promote more renewables
5. Accept some nuclear
6. Promote cross-border power transfer

IEEE Climate Change Website

https://climate-change.ieee.org

IEEE Climate Change Collection



As the world's largest organization of technical professionals, IEEE has both the opportunity and the responsibility to assist in organizing the response of engineers, scientists, and technical professionals across the world to address the causes, mitigate the impact, and adapt to climate change.

IEEE's scholarly publications, conference proceedings, technical standards, and other materials help foster the exchange of technical knowledge and information for the critical climate issues that our planet faces today.
