Who Has The Most Historical Responsibility for Climate Change

23 rich, developed countries are responsible for half of all historical CO₂ emissions.

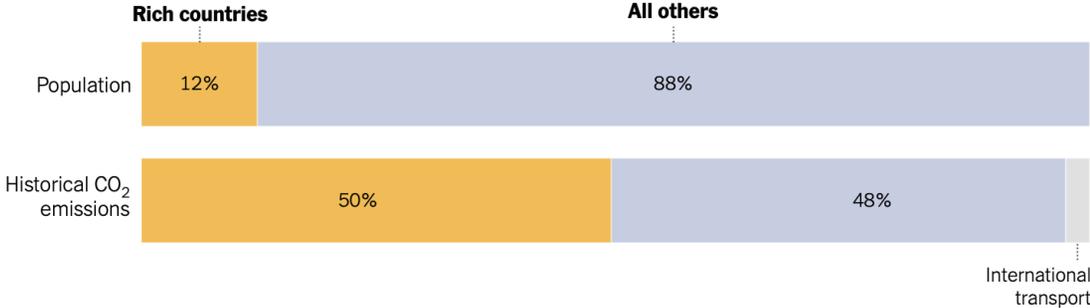

More than 150 countries are responsible for the other half.

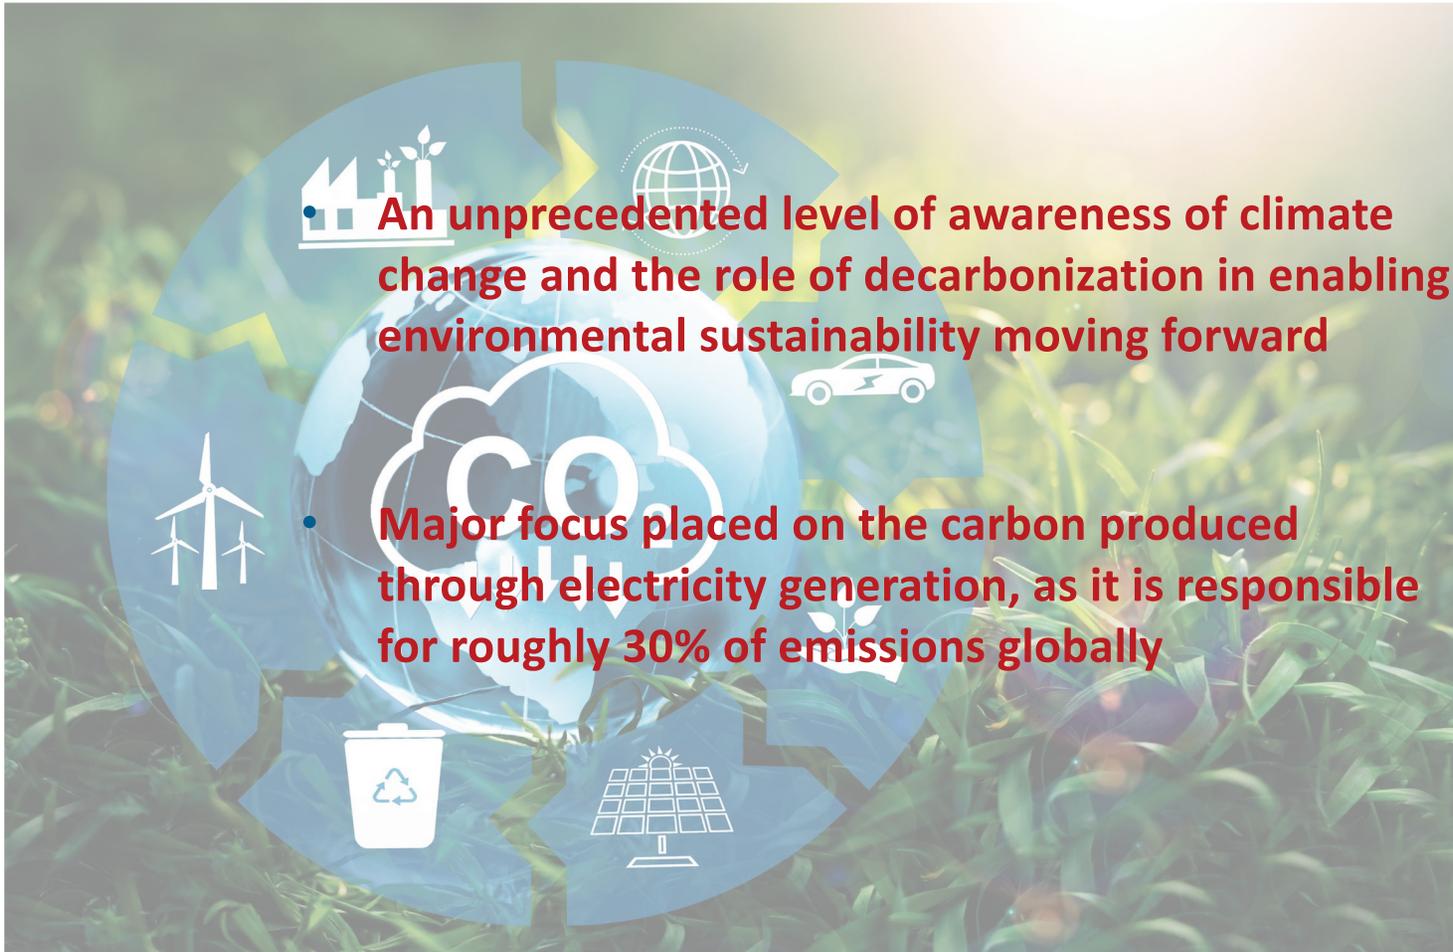

Source: The New York Times article "Who Has The Most Historical Responsibility for Climate Change?" by [Nadja Popovich](#) and [Brad Plumer](#), Nov. 12, 2021 (<https://www.nytimes.com/interactive/2021/11/12/climate/cop26-emissions-compensation.html>)

Who Has The Most Historical Responsibility for Climate Change

Rich countries, including the United States, Canada, Japan and much of western Europe, account for just 12 percent of the global population today but are responsible for 50 percent of all the planet-warming greenhouse gases released from fossil fuels and industry over the past 170 years.

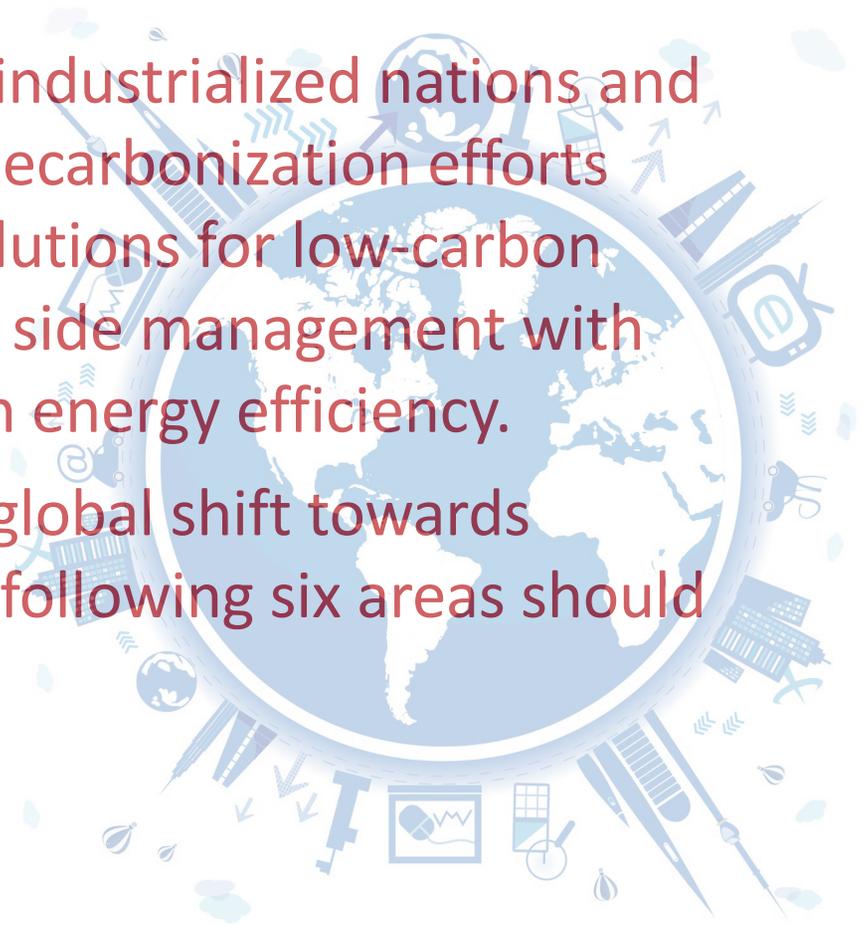

Source: The New York Times article "Who Has The Most Historical Responsibility for Climate Change?" by [Nadja Popovich](#) and [Brad Plumer](#), Nov. 12, 2021 (<https://www.nytimes.com/interactive/2021/11/12/climate/cop26-emissions-compensation.html>)

- **An unprecedented level of awareness of climate change and the role of decarbonization in enabling environmental sustainability moving forward**

- **Major focus placed on the carbon produced through electricity generation, as it is responsible for roughly 30% of emissions globally**

- Navigating the tension between industrialized nations and emerging economies for global decarbonization efforts requires a diverse portfolio of solutions for low-carbon generation, storage and demand side management with advanced technology focusing on energy efficiency.
- To more efficiently facilitate the global shift towards renewable energy adoption, the following six areas should be our priority.

Reduce Carbon Emissions from Electricity Production

Reduce Carbon Emissions

1. Use less electricity, energy efficiency
2. Use low carbon fossil fuel power plants
3. Use H₂ & other storage technologies
4. Promote more renewables
5. Accept some nuclear
6. Promote cross-border power transfer

Customers Controlling Buildings Optimized for Savings

Measured energy savings across deployments

20% HVAC Energy Savings

25% Lighting Energy Savings

Occupant satisfaction: spaces controlled by a building automation systems are more comfortable due to more consistent temperature profiles and healthier air quality through consistent monitoring of environmental factors (CO₂ levels, PM 2.5).

Energy Efficiency Applications

Consider light bulbs

- Provide more energy efficient applications and tools globally
- The amount of electricity required to run an LED light bulb is less than 15% of what is needed to run an incandescent light bulb producing the same amount of light
- Providing developing nations with lightbulbs that are more energy efficient can ensure that energy consumption and carbon emissions are being reduced requiring lesser investments in power generation, transmission & distribution

Highly Efficient Fossil-fuel Power Plants

Carbon Capture and Storage

- Combined Cycle Gas/Steam Power Plant
- Ultra-supercritical steam power plant

Eemshaven ultra-supercritical steam power plant, The Netherlands

Power Plant: Two units rated 800MW each

Efficiency: 46.2%

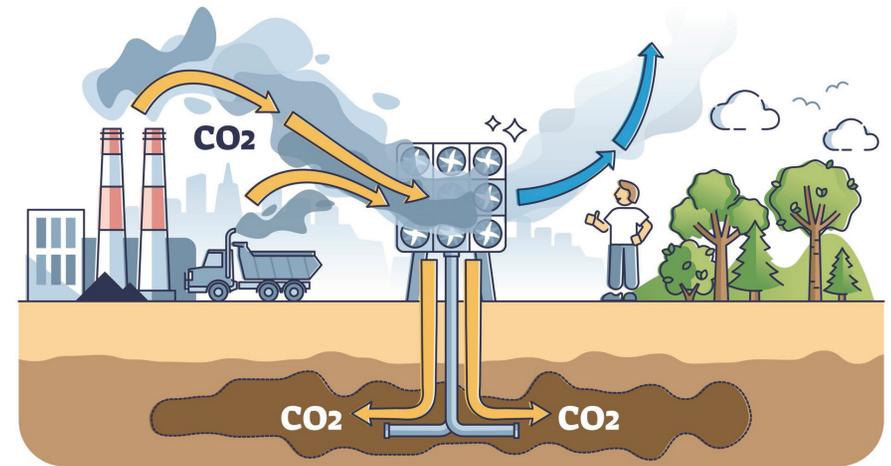

Temp: 609 deg C

Steam Turbine: Siemens SST5-6000

Built: 2014

Carbon Capture & Storage Systems (CCS)

- Can help ensure that emissions created during the energy generation phase will not be emitted into the atmosphere
- These technologies have the potential to significantly reduce carbon emissions in energy systems across the board

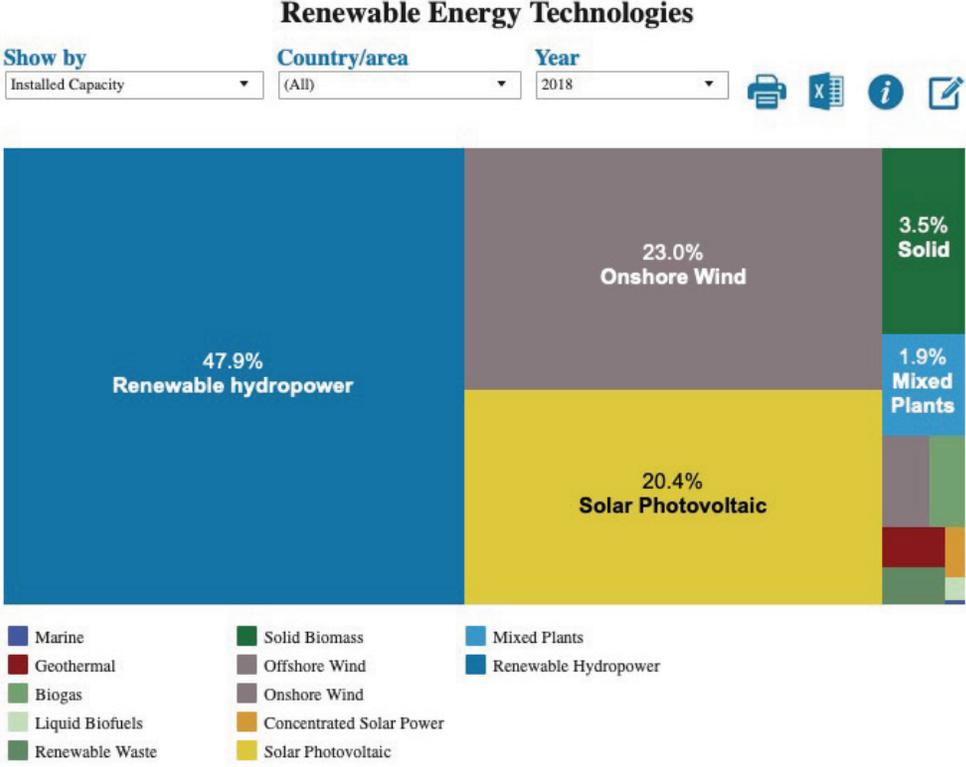

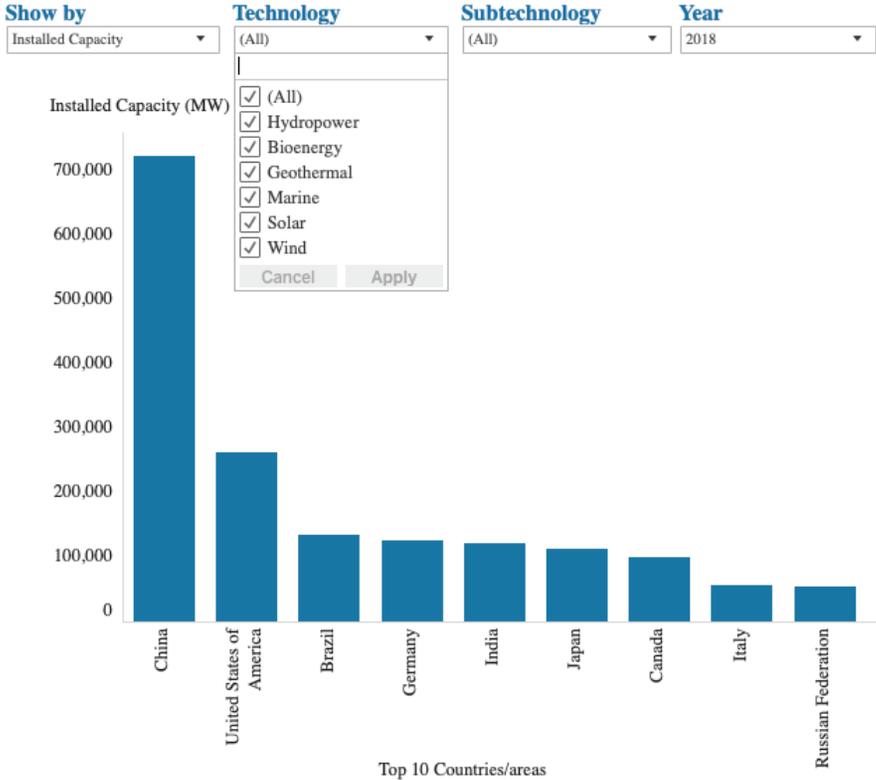

Renewable Energy Integration

Build more strategically from the start

- Focus on where energy is needed most, via three core components:
 - Energy generation
 - Transmission
 - Distribution

Total Installed Renewable Energy Capacity Top Ten Countries (2018)

Source: International Renewable Energy Agency IRENA
<https://www.irena.org/Statistics/>

Hydrogen and Storage Solutions

Optimize renewable energy solutions being integrated into energy grids

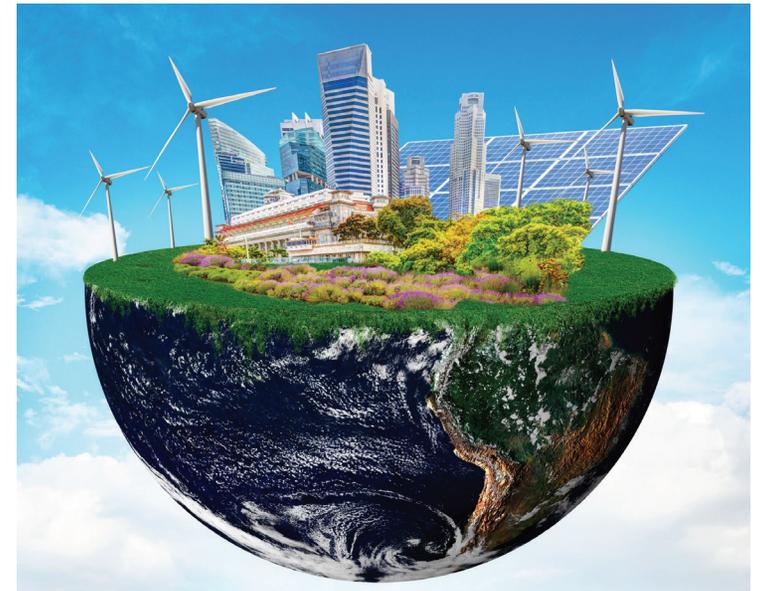

- Low-carbon hydrogen will help emerging economies to meet climate goals in and of itself
 - Provide for diverse energy portfolios
 - Improving resilience
 - Lowering costs
- Storage solutions serve as optimizers for other renewable energy solutions
 - Ensure that electricity generated during off-peak hours does not go to waste

Cross-Border Energy Transfer

We all are impacted by climate change

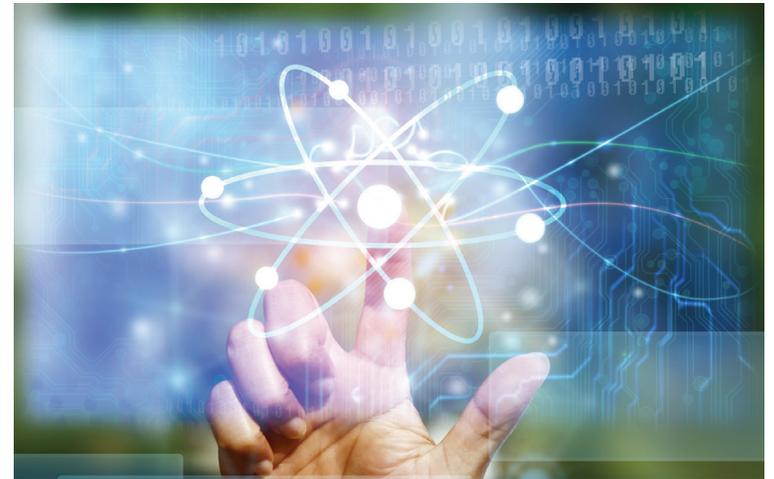

- As we are in this fight together, our solutions should be collaborative to secure better outcomes for all countries, regardless of location
- The International Energy Agency (IEA) has identified three main modes of cross-border energy integration:
 - Bilateral
 - Multilateral
 - Unified

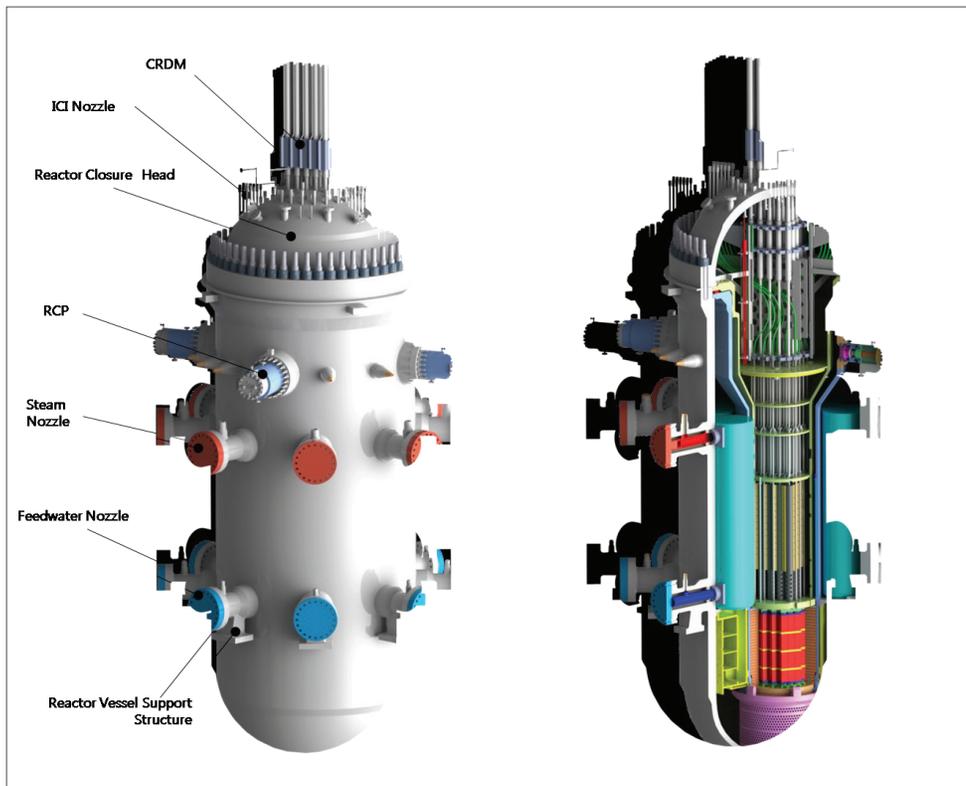

Advanced Nuclear Technologies

Diverse solutions to address climate change

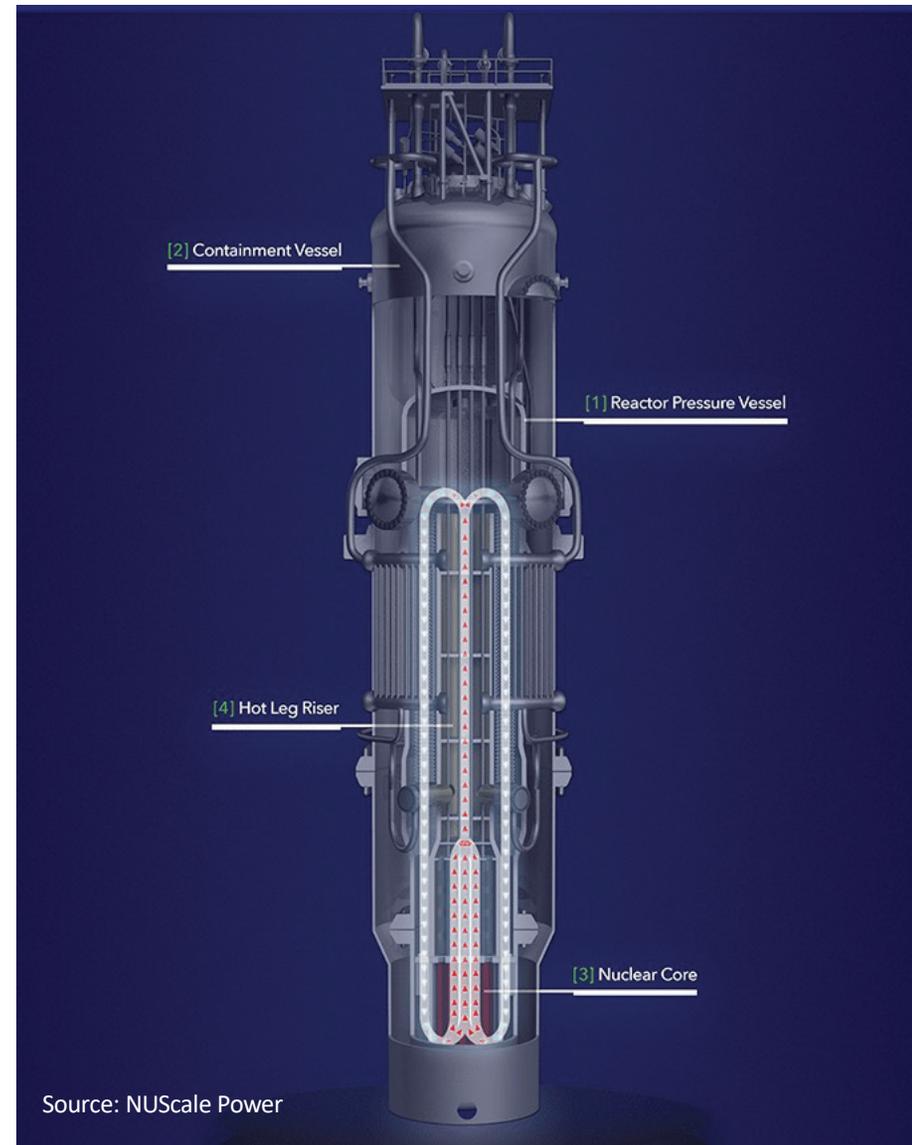

- Advanced nuclear technologies, such as small modular reactors (SMRs), can play a role
 - Smaller and can be built more quickly than more traditional nuclear reactors
- Ramping up the development of SMRs can help to produce energy when and where needed
- This energy could be integrated into existing power grids
 - helping to provide improved resiliency while simultaneously reducing emissions

Small Modular Reactors (SMR)

20m tall, 2.7m dia. 590 tons LWR

So, What is the bottom line?

- Efforts in the electric power sector by replacing fossil fuel with renewables and nuclear will help
- But if emission from the transportation sector continues to rise, the power sector contributions will not be enough
- Large scale Electric Vehicle deployment will help, but question remains – how will the EV be powered

IEEE Work on Climate Change

Connect efforts to mitigate the impact of climate change

- IEEE Climate Change Collection (ICCC)
 - Collection of climate change-related articles from IEEEXplore
 - Open for access before COP27 (06-18 Nov 2022)
- [IEEE Climate Change Website](https://climate-change.ieee.org)
 - <https://climate-change.ieee.org>; live since 24 October 2022
- IEEE Personal Carbon Contribution (IPCC) App
 - Tool for individuals to compute their contributions to carbon emissions emanating from their daily activities like electricity usage, travel, recreation, etc.
 - Under development

RESOURCES FROM IEEE

As the world's largest organization of technical professionals, IEEE has both the opportunity and the responsibility to assist in organizing the response of engineers, scientists, and technical professionals across the world to address the causes, mitigate the impact, and adapt to climate change.

IEEE's scholarly publications, conference proceedings, technical standards, and other materials help foster the exchange of technical knowledge and information for the critical climate issues that our planet faces today.
